The following is an examiner's statement of reasons for allowance: Independent claims 34, 40, and 44 recite an electrical power fault detection and isolation apparatus comprising, along with other recited elements, a sensor circuit that detects a transient, arc or ground fault by detecting voltage drops across the main contacts capable of connecting a power supply to a load, comprising a sensing diode and a tripping to open the main contacts in response to the detected faults. The closest Prior Art of Record, Pintell (US 4, 068, 276) discloses an electric power fault detection and isolation apparatus comprising a sensing diode and a trip circuit to open the main contacts in response to the detected fault. Pintell's diode detects the voltage between the line and the return, not across the main contacts as recited in the claim, and therefore allowable over the Prior Art of Record.

Independent claims 41 and 43 are directed to methods of detecting a transient, arc or ground fault comprising the step of detecting the fault by sensing, using a diode, voltage drops across the main contacts connecting a power supply to a load, and opening the main contacts in response to the detected faults. The Prior Art of Record does not disclose the step of detecting the voltage across the main contacts, using a diode, and therefore, allowable.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
